

# Dock Seals

by Comfort Tech, Inc.

## **Protecting Your People, Products and Building Environment From the Outside Elements**

- Durable Industrial Grade, and Premium Fabrics for Long Life Expectancy

- Available in Two Different Header Types:

- Curtain Style (shown) for Taller 10' High Dock Doors

- Foam Head Pad (not shown) for 8' and 9' High Dock Doors

- Kiln-Dried, Treated Wood Frames Eliminate Warping or Twisting. Galvanized Steel Backing Also Available for Most Models

- High Visibility 24" High Yellow OUTBOARD Guide Stripes Help Drivers Position Trailers Correctly at the Dock Door and Stay Yellow Longer  
Full Height Guide Stripes Are Also Available

- Optional Wear Pleats (Shown) Can Make Dock Seals More Durable and Can Increase Life Expectancy

- Durable Construction Designed to Provide Years of Service

### Popular Options:

- Wear Pleats in 4" or 8" Exposure
- Tuff-Face Inside Wrap for Critical Areas
- Adjustable Head Curtains
- Extended Projections
- Full Height Guide Stripes
- Extra Layers on Pads & Curtains
- Tapered Side Pads for Sloped Drives

# DOCK SEAL

## FEATURES

Comfort Tech Dock Seals provide the most effective seal possible at the loading dock door to ensure reduced heating and cooling costs, worker safety and comfort, security, and product protection against the elements.

A wide variety of dock seal designs, sizes, options, and cover fabrics allow us to custom build a dock seal designed to meet your requirements. Years of experience result in time proven craftsmanship and quality construction, giving you the best value for your investment.

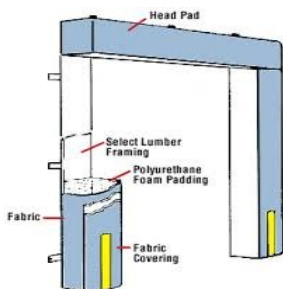

Comfort Tech uses only the highest quality components. We offer a full range of industrial fabrics, engineered and tested for abrasion resistance, tear resistance, weathering, and flexibility. All lumber used for the backboards is KILN-DRIED and pressure treated. Our virgin polyurethane foam maintains its high resiliency to prevent foam pad "sag." High Visibility yellow guide stripes are standard on all models, as well as galvanized steel mounting hardware.

## HIGH QUALITY FABRICS

The dock seal cover fabric is a very critical component in determining the useful life of a dock seal. Comfort Tech offers a variety of vinyl fabrics in different weights and colors designed to suit every dock situation from light volume traffic to the even the heaviest.

## FOAM HEAD PAD

A 12" wide foam filled, wood backed head pad is standard on Comfort Tech Dock Seals for doors 9'-0" high or less. Three sided foam protection provides the most effective seal at the loading dock door. Extra wide head pads 18" to 24" are available to allow varied truck height coverage. As an option, a chain weighted drop flap can be sewn to the underside of the foam head pad to service an occasional lower truck and is held up and out of the way with Velcro tabs.

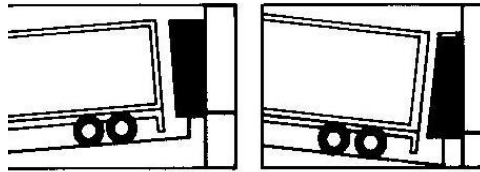

## WEDGED SIDE PADS

Wedge cut side pads extend foam only into the door opening to effectively seal the trailer without subjecting wood backboards to damage from passing loads.

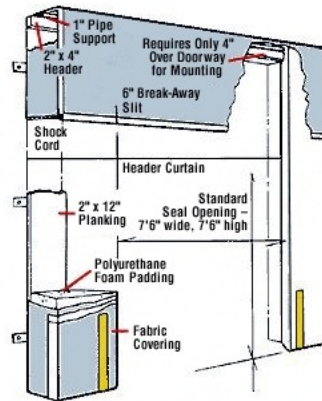

## INCLINED or DECLINED DRIVE

Tapered dock seal side pads are available to accommodate sloped drives. Even truck contact and compression into the foam pads can help to reduce excessive wear at the top or bottom of the dock seals.

## "C" CURTAIN STYLE HEADER

The "C" series curtain header dock seals are designed to accommodate higher dock doors and varying truck heights. The "C" series header can also be equipped with extra wear areas at critical truck contact points to reduce wear. Curtain headers are used when door sizes exceed 9'0" high. The head curtain extends over and down the face of the side pads to cover a wide range of truck heights. By adding Velcro splits with a rope pull-up system the "C" Curtain Header becomes adjustable.

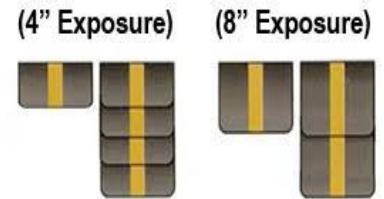

## FACING OPTIONS

A second layer of material can be sewn over the base fabric to provide some additional protection on the face of the dock seal. Available in your choice of fabrics to help provide longer dock seal life.

## WEAR PLEATS

Wear Pleats provide extra protection on the face of the dock seal. Wear Pleats are overlapping layers of material sewn to the base fabric of the side pads as well as the head pads or head curtains and can increase durability and extend the dock seal's life. Available in two configurations with a 4" exposure as well as an 8" exposure. Custom exposures are also available upon request.

***Our Goal:  
Produce Products  
That Exceed  
Our Customer's  
Expectations and  
Ship On  
Time, Every Time***
